

General: Is upgrading from version 5.2 to 6.0 possible by changing the download repositories?

No.

You can't upgrade directly from 5.2 to 6.0 because the APIs and CMDaemon database have changed significantly. Trying to do this would be pretty complicated and error prone, and is not supported.

The right way to do it is to install 6.0 on a clean system, then adjust the cluster to match the requirements.
