

# OpenStack: The VNC console URL isn't correct in the Horizon dashboard. How do I change it?

You may modify the VNC proxy hostname in Bright which updates the VNC Console URL. ion the Horizon dashboard.

This may be required as the VNC proxy URL is showing up as

**http://master:6080/vnc\_auto.html** for example and the internal network is not directly accessible from outside the cluster.

```
#cmsht  
% openstack  
% settings  
% compute  
% get vncproxyhostname master  
% set vncproxyhostname bright.example.com  
% commit
```

Unique solution ID: #1432
